

## LocalMaps v2.3.2 and v3.2 Functionality Matrix

Eagle technology's [LocalMaps](#) is a powerful web-based solution for organising, viewing, querying, and reporting on your organisation's spatial data. Highly regarded for its intuitive user interface, flexible configuration options, and strong user community, LocalMaps offers a reliable and proven solution that meets the needs of diverse industries and organisations. It is software that can be deployed on Windows, on-premises or on cloud infrastructure, and can be connected to existing databases (SQL Server, MySQL, and more). LocalMaps fits all your internal and/or public facing Web GIS needs.

This functionality matrix features the vast and diverse capabilities in the new version of LocalMaps (3.2) built using experience builder platform compared to previous version (2.3.2) built using web app-builder. With this, you can identify which widgets, capabilities, and features are part of v3.2 release and what's coming up in the future releases. Here is a link to the demo instance – [LocalMaps v3.x Demo](#)

### High Level Comparison

#	Component	Feature	2.3.2	3.1	3.2	Notes
1	Administration - Connection	Data sources	✓	✓	✓	3.2 is in on par with 2.3.2 features
2	Administration - Configuration	Reporting	✓	✓	✓	3.2 is in on par with 2.3.2 features
3	Administration - Configuration	Feature query	✓	✓	✓	
4	Administration - Configuration	Search	✓	✓	✓	
5	Administration - Configuration	Social Logins	✓	✓	✓	
6	Administration - Configuration	Security	✓	✓	✓
